Please provide your
comments in the text
box below:

I live in a rural area northeast of Tonganoxie, KS which is only served by satellite (Viasat, Hughes) or several different wireless/LTE companies. Starlink has been offered, but is still not available after 2.5 years of waiting. Service from Viasat and Hughes is slow and unreliable. Actual speeds on Viasat are around 10-15mb down and .02-1.5mb upload. I recently switched to Mercury LTE service and now get 16-20mb down, and 1.5-4mb upload depending on the time of day. As you can imagine, even with the better speeds from Mercury we are still very far behind the national average. The price of this service is also far more than what customers in more populated areas pay for much faster speeds. I have uploaded a record of the speeds on satellite and broadband that I receive at my house over the last 3 years.

Upload supporting documentation - multiple files should be submitted as a .ZIP file.
