We have several High Speed Internet packages to choose from, all allow you share files, stream video, download music, games and much, much more! Choose the package that's right for you!

What Is Broadband?

BROADBAND is the common term for a very fast connection to the Internet. It allows users to download online entertainment such as video clips and music, listen to digital radio, send e-mail faster and speeds up everything they do online.

A broadband service can transmit information at up to 40 times the speed of a dial-up modem connection. As the connection is always on, like water or electricity, users don't need to dial up every time they want to log on.

Broadband is revolutionizing online activities everywhere for businesses, entertainment and public services. Faster speeds of up to 160 times a dial-up connection will bring about new services, including internet-TV and video on demand, across home, business and public life.

Cable Modem

Cable modem service enables cable operators to provide broadband using the same coaxial cables that deliver pictures and sound to your TV set. Most cable modems are external devices that have two connections, one to the cable wall outlet and the other to a computer, or wireless access point. They provide transmission speeds of 5 Mbps or more.

Subscribers can access their cable modem service simply by turning on their computers without dialing-up an ISP. You can
