Box 320  
Udall, KS 67146

Subject: Letter of Confirmation of Service

Dear CPF Program Representative:

This letter is to confirm that Udall, Kansas based communications company Wheat State Technologies has placed gigabit capable fiber-to-the-premises (FTTP) into 100% of the town of Oxford, Kansas and Gigabit broadband is currently commercially available throughout this community. RVW, Inc. provided telecommunications engineering services for these community-wide FTTP deployments so has the required knowledge to make this certification.

This letter is in support of Wheat State's challenge to the "Brightspeed Sumner" application. As Wheat State currently provides gigabit service to the entire Oxford portion of the application area, RVW encourages the Kansas Department of Commerce to deny at least this portion of the application to avoid using precious federal resources to overbuild an area already provided with state-of-the-art fiber to the premises service.

Please let me know if there are any questions whatsoever.

Very truly yours,

RVW, Inc.

A handwritten signature in black ink, reading "Mark D. Massman".

Mark D. Massman, P.E.  
President and Chief Telecommunications Engineer
