Please provide a phone number: **+16208455682**

Please provide your email address: **jkuehny@kanokla.com**

I am providing response comments related to the following application (choose one): **KanOklaNetworks_Halstead**

I am responding to the concern that this project: **Proposes to serve an area that already has service**

Please describe: **AMG/NextLink is unable to provide 100 mbps download and 20 mbps upload to ALL residential customers in the defined area as required by this grant application to be considered served.**

Please provide your response to the public comments received in the text box below:

The proposed area is currently served by KanOkla to our customers we have served for 15 years with the same fixed wireless service AMG/NextLink was awarded RDOF for. Therefore, it seems as though AMG/Nextlink has come to Kansas from Texas to duplicate the exact same service KanOkla built back in 2006. We bid against them in RDOF so that we could convert our wireless customers to fiber at that time. We dropped out at the lowest price point possible to still fit our budget to bury fiber.

Limits of Fixed Wireless: KanOkla has extensive fixed wireless networks and knows that AMG/NextLink is unable to reach all residential customers in the census blocks they were awarded through the RDOF auction. The distance, line-of-sight obstructions, topography, and limits of the technology will restrict the maximum number of customers within their reach to less than 100%, which is required within this grant application.

Life of the asset: Exposure to the elements will speed the deterioration of equipment and with no follow-up requirement to upgrade or replace equipment, there is no guarantee the life of the current NextLink network will have an asset life past 5 years. KanOkla's buried fiber optic network will protect it and produce the longevity and life of the asset for decades. The efficiencies are clearly the best option for the residential customers in the proposed funding areas. Current customers that receive NextLink service are not receiving the speeds they subscribe to (see attached), and with the future demand on the networks, NextLink will not be able to meet the needs of these customers in the foreseeable future.

KanOkla should be awarded the opportunity to construct and expand our robust fiber optic, multi-gig network to the residential farmland within a few miles of our fiber-fed existing fixed wireless tower. AMG/NextLink only offers 100/20 which is their maximum, but is less than KanOkla's minimum of 100/100 Mbps. We build upward where AMG/NextLink maxes out. KanOkla will offer 2.5 gig to last for years, plus having served the area for years, we commit to serving the area with updated electronics over the decades to keep the system modern for another century. AMG/NextLink is not a local provider and does not have the relationships with these families that KanOkla has known since the inception of our fixed wireless network years ago. We have served them with fixed wireless and see their smiling faces at shared school events, coffee shops, and community events. We started a relationship with with these residents years ago and want to convert them to the best technology that is offered in the world today - multi-gig fiber service. They need more and deserve more by someone they know and trust.

Please provide supporting documents relative to your comments. Please submit multiple files as a ZIP file.
