We are in dire need of viable high speed internet. As the rest of the world has become more connected, our area has been left behind. Where we are currently, the area providers don't support this area and those that do, do not consistently meet our needs or are plagued with support issues. Satellite is another option however it is not viable for our lower latency needs for remote work, school and telemedicine. The speeds we currently can count on are below 10Mbps down and .06 up. As a family of 5 we need much better service to support telemedicine, online school and my job as a federal government contractor requires remote work. The current services available are simply not good enough. Thank you for your consideration.

Upload supporting documentation - multiple files should be submitted as a .ZIP file.
